PROFILE

I am a video game development student with a special interest in programming, computer science, and software development. I am looking for an internship where I can apply my knowledge of programming, development, and teamwork, while continuing to learn from industry professionals.
I consider myself a responsible person with initiative, a willingness to learn, and the motivation to take on challenges with a sense of responsibility.

EDUCATION

Bachelor's Degree in Video Game Development **2023/2027**

Complutense University of Madrid

- Studies focused on video game development, programming, and software development, with a special interest in C++ programming, object-oriented programming, multiplatform development, agile methodologies, data structures and algorithms, computer music, discrete mathematics, and linear algebra.

EXPERIENCE

For more: https://bxxcxxw.github.io/Portfolio_Bing/

Annual Video Game Development Project | Team Project **2024-present**

- Game development in C++, C#, or JavaScript as part of team-based projects.
- Participation in all phases of the development cycle: requirements analysis, documentation, design, implementation, testing, and maintenance and publication of a release version.
- Use of Git for version control and collaborative work.
- Application of agile methodologies and organization of teamwork.
- Troubleshooting and continuous improvement of code.

QA / Software Testing **2024-2026**

- Design of unit tests by selecting appropriate coverage criteria for each situation, including graph coverage, input space partitioning, and logic coverage.
- Implementation and execution of automated tests using JUnit and Mockito.
- Design of test cases to verify expected software behavior and identify potential defects.
- Analysis of test results and evaluation of test coverage to improve software quality.

HUGO: 3D Game Engine | Team project **2026**

- Architecture Design: Developed a modular C++ game engine based on the Entity-Component-System (ECS) pattern, applying data-oriented programming principles.
- Third-Party Library Integration: Integrated OGRE for rendering, Bullet Physics for physics simulation, miniaudio for audio, and OGRE Overlay for the user interface.
- Tool Development: Implemented an automated build pipeline and integrated editor tools to streamline map loading and facilitate team collaboration.
- Version Control: Collaborated using Git, following best practices for code organization and version control.

HABILITIES

- **Programming Languages:** C++, C#, Python, Java, JavaScript, GDScript
- **Game Development:** Unity, Godot, Phaser, FMOD
- **Software Engineering & Testing:** Object-Oriented Programming (OOP), Data Structures and Algorithms, Unit Testing, Scrum
- **Data Processing & Databases:** NumPy, pandas, Matplotlib, CSV, JSON, XML, SQL (basic), SQLite
- **Development Tools:** Visual Studio, Visual Studio Code, Eclipse, Android Studio, Git, GitHub
- **Additional Tools:** Blender, Microsoft Office, Reaper

LANGUAGES

- **Chinese:** Native • **Spanish:** Native • **English:** B2 • **korean:** Básico
